cs108 cheatsheet Web Programming org 26fa-cs108

SETTING UP AN ASSIGNMENT

```
cs108 new a04                    make the folders, pick auto or manual
cs108 verify a04                 check it before anyone sees it
cs108 template a04 --go          push the starter to GitHub
cs108 assign a04 --go            create every student's repository
```

DURING THE ASSIGNMENT

```
cs108                            what is out of step, and what to run
cs108 ui                         the same thing in a browser
cs108 students import form.csv   merge new GitHub usernames
cs108 patch a04                  preview a fix to a do-not-edit file
cs108 patch a04 --go             push it to everyone
cs108 patch a04 --missing --go   add starter files the repos do not have yet
cs108 access a04 --go            let your grader read every student repository
```

GRADING

```
cs108 marks a04                  run the autograder, write the gradebook
cs108 collect a04                just download everyone's work
cs108 sheet a04                  a CSV to type marks into
cs108 sheet a04 --updated        only the students whose work moved
cs108 fetch a05                  get an assignment's setup (a grader)
```

add --as-of "2026-10-14T23:59:59-04:00" to grade what existed at the deadline

WHEN SOMETHING IS WRONG

```
cs108 doctor                     check everything at once
cs108 doctor --smoke --go        push one job and see it run, queue or fail
cs108 config                     show every setting
cs108 config --check             test GitHub, the org, and the runners
cs108 config runner NEW-NAME     change one
```

THREE THINGS TO KNOW

Nothing changes GitHub without --go.

Never push a file students have edited. patch will refuse; let it.

The green tick is not the grade. marks and sheet are.

WHERE THINGS LIVE

```
assignments/a04/starter/     exactly what the student gets
assignments/a04/answers/     your solution, never published
autograders/a04/             the grading bundle, never published
~/cs108-grading/a04/         everything that comes back
course.json                  every setting; course-history.log says what changed
```
